

City & Guilds Diploma in Engineering Maintenance, Installation and Commissioning Level 3

In a nutshell

This Level 3 City & Guilds accredited course builds on the knowledge and skills gained at Level 2. It is ideal for maintenance technicians within engineering environments or those who wish to pursue a career in this area.

This course is for you if...

You are involved in the maintenance of machining equipment within engineering environments, specifically those that involve the fault investigation and repair of hydraulic and pneumatic mechanisms and systems.

What will I be doing?

You will learn about:

- Engineering health and safety

COURSE INFORMATION LEAFLET

- Engineering principles
- Principles of engineering maintenance, installation and commissioning
- Maintenance of machine systems
- Maintenance of hydraulic systems
- Maintenance of pneumatic systems

What is expected of me?

It is expected that you will approach the learning environment with the mindset of a professional engineer. You will be expected to work safely and with a keen attitude to problem solve and learn.

What comes next?

Following this course you could progress into industry or onto HNC (subject to qualifications and experience)

Additional information

You will be required to wear PPE for all practical aspects of your course during the workshop environment.
